

FACTORS	PRODUCT COMPANIES	SERVICE COMPANIES	CONSULTANCY	DIRECT DOMAIN COMPANIES
Description	Producing Software's across all the platforms of IT Lifecycle and for all industries Eg : OS , IT Tools, Programming Languages, Algorithms for real time applications	70 Percentage doing consultancy by mapping employees to the domain companies ,30 Percentage Manufacturing full scale applications for web , mobile using the products delivered from product companies together making employees how to use the products	Mapping the Employees Directly to the Domain ,product and service companies	The End Customer of Service, Product and consultancy companies. 90 Percentage of the companies directly doing the applications for web , mobile using employees recruited from service and consultancy companies with products from products based companies or maintaining the applications developed by service companies in worst case
Example Companies	Google, Microsoft, Zoho, Salesforce, IBM Products, Oracle , Pega ,HP etc	Accenture, CSC, TCS, Infosys, Wipro etc	Deloitte etc	All Banks, Retail ,Healthcare ,Insurance etc Companies
Job to do	Starting from creativity, Designing, Developing and Maintaining the products	well Maintenance by searching all over the internet to find good solution out of various products and to implement the same	Nothing to say	Think (as most of the necessary components and ideas will come from product catalog) how effectively to make an application and maintaining well
Aim	To make plenty of successful products each and every year	To make well revenue with employees	Just to get a share	To make their business well by doing good applications to attract more customers and to reduce the spending cost
Strategy	Talent Employees = Good Products	No of Employees = Revenue	No of Employees = Share	More Applications = Good Business
Key Players	Talented Designer , Developer and Thinker	Managers , Good Communication Skill People, Well Business Players	-	Business People and Share Holders
Technical Needs	High Technical Skill needed from the following fields 1. Core Applied Engineering Knowledge 2. Good Applied Mathematical Skills 3. Recent Market Trends and Needs 4. Advanced Research Concepts	Less Technical Skill would be fine instead the following make good 1. Daily Technical News Reading ability to check the products in market 2. Good Communication Skills 3. General Knowledge and More languages to made betrayal with the clients	-	Good Analysis Skills to analyze recent trends and to make an application different and comparatively good than others
How to get a Job	Hard to crack the Interview, the following may help 1. High Technical Knowledge 2. High Problem Solving Ability 3. Good Luck 4. Must go through all the pattern questions around the web	Easy to Crack the Interview instead of studying a lot just go through a set of previous two to three years question papers is fine ,Only if you have very very bad luck you may loose	-	It's also easy but you need little more technical knowledge than the service company interviews, If you learned or having any certificate of any products can help in this case
Studying in Part time along with Job	If you have more degrees ,You will get super job position in the company, Normally here a bachelor degree holder will do development, a master degree person will do design and architect and a PhD doctorate will do research and creativity.	Degree is not a matter of concern here , Whatever you learned from the degree you have to throw away and needs to do more hands on the products from product companies, You can give a full stop for your study throughout your life	-	Here little it may help, But if you are over smart and in luck visible to the business people eye, you can switch the position if they allowed even without a degree in hand
Is creativity and sharing ideas helps	Here everything is based on the talent and creativity, If you are over talent and you are able to solve problems which is not possible to solve for a long time ,Your solution will be considered	Management will ask you to do some POCs ,But it's just to inform to the higher management to maintain records and important the information what you shared will go in a different format	-	The essential motive here is to make end user of the application to be happy ,If you are able to make it ,they will make you to be happy, Its little difficult here your idea to go to production as so many people in the hierarchy to approve and

	<p>and go for analysis ,The distance to researchers and higher management is less .It's easy to approach them, Normally that scenario of unsolvable problems won't happen as everyone around you will be most talented people ☺ and you cannot share some thoughts and internet search items as most of them coming from your nearby employees to the internet ,you solution should be solid ,neat and clear, Audience of your idea are highly talented ,in one short they can understand what you are trying to make</p>	<p>to the higher management as normally managers are busy man of the company ,what you tell they will listen in 5 to 10 mins and what they remembered will go to higher management (by the time they met higher management), If you share some volunteer useful ideas ,it will go to dustbin as like letter to government and government related needs because service company don't need it ,as creativity is no value here, Normally matured and money making ideas and ideas followed by most of the people around the world is very important here and main point as here no highly talented peoples(not required at all)available to segregate which idea is good ,What coming to your mind you can share, Even if it's not good or not solid sometimes it will help for your appraisal, Sometimes what you see in the movies and science fiction film also help here you can share and mainly it will help for your appraisal, As more you open your mouth and don't allow other people to speak in a meeting or discussion, You will get a good rating because no one in the audience knows about what you are speaking mostly</p>		<p>make it ,If some intermediate person rejected due to personal reason or you don't have good rapport with him ,Your idea may get blocked</p>
Is hard work and dedication help	<p>Here that's very important, If you are able to make a product before or on the time line ,You will get appreciation, Hard work make success here</p>	<p>Instead of hard work you have to go with smart work as if you done a small thing you have to make it as bigger in your though ,Most of the time something won't work properly as you are maintaining a big enterprise system ,You need more patience to wait to do your job , Sometimes it will go for two to three days to be back up and running , You have to tally those days work in weekend ,even if you are able to solve the problem within the week(as you are a superfast worker) then you are killing your rating with your own hand, Always people working in weekend here will show as bright in the managers eye and make them to assume you are so dedicated and solving very complex problems in weekend and it will help a lot for your appraisal</p>	-	<p>It will help if you have good luck to visible it to the business peoples</p>
Making Good Quality	<p>Normally all product companies will made good</p>	<p>Quality is not possible to make it here even if the</p>		<p>Here as said if the end user don't have any blocking issue ,then your</p>

	quality tools, If you are not following standards ,you have to learn it very quickly ,otherwise you may be de promoted	company interested without spending money on that ,The main problem is day by day peoples are getting changed in a project as most people are moving out of the company and coming inside, To complete the project in on Timeline may be big thing here ,The new comer don't have enough time to go through the code , He must have to solve the problem by searching in the internet ,If your application working for a happy flow in the dead of the timeline then your rating also happy, Even if you spend hours to solve a problem with good solution and easy maintainable solution ,Your future replacement simply say to the management it's a worst code even if he don't have enough experience on that		quality is good else you are a culprit
Salary	You will get very good salary , promotions and appreciations gifts as per your talent	Comparatively medium and low salary based on the company you are joining and your experience. If you have good luck and you got an onsite opportunity you can save some money		You can get good descent salary affordable to your ability
Work Tension	As making a product is not that much easy ,You have to spend more time and to do stress full work , You will be very happy at the product launch as something achieved and it will erase all stress from your memory	It's very less stress work comparatively as per technical complexity ,But you have to spend (even its waste) more time on weekend and nights to proof yourself to the management		Your final product is more value here ,If you are able to make a product within the timeline then you can take leave whenever you want
Project ,Team	Always you will get a good project as most of the companies here don't spend money on wasteful products, You are going to work on a small team with highly talented peoples, It will help for your future technical growth and knowledge a big	Getting a good challenging project is very rare here , Most of the projects are supporting and maintenance work, Any degree holder or even a talented non degree holder can solve an issue, you have to wait for a long time and if you have luck, you can get some what ok project ,otherwise you will be force to a project and technology you don't know. Always you are part of a big team and you must be careful with your team members while speaking, it may make your rating to decrease and made you to lose your onsite opportunity as per certain company policies ,only limited employees can get a good rating ,Most of your team members may doing this job for time passing especially women employees but they normally expect good rating , You must be careful while speaking with		You will get a chance to see most of the peoples you never seen in your life like analysts, Business peoples etc, Before joining the company you will get the idea on which technology and project you are going to work

		them		
Future Growth and learning	As said you will learn a lot and your future will be in a safer side and you can get a good job very easily outside	Learning is not important here and you will be zero in the same level as out from you college level, But instead you will understand how luck is important in life , If you are a talented student with good percentage out and got an on campus selection, you will get frustrated and lose your confidence and your memory power ,Basically during college day, talent students will study more than the syllabus and normally their mind be in a good speed to solve a problem , suddenly if you reduce your mind to think little ,then it's difficult to remake it ,Only you can get some service based company jobs (very rare) outside as you did not learnt anything		Business don't care about your growth and learning, But you will get more time and help in terms of money to learn
Future Technology Sustainability	They are the creators of the world, All the new technologies will automatically come to your mind as mostly produced by your company	As they totally depend on product companies and product companies started working on machine learning ,most of the supporting jobs going to replace by ML, No one have idea what they are going to do?, But some companies started doing some funny thing saying automation and automating applications which looks like final year student project solution		As new products came ,they will start improving on that as business depends on competition
Environment and Culture	A colorful Surrounding with free coffee ,lunch facility(some companies only) and you can wear your own dress code what you want, No very strict policies and you no need to follow that	Mostly crowded environment and sometimes you have to wait in a long queue for lunch, Even if you pay more you will not get that much good tasty and quality food, Nothing is free here, you have to pay for everything including weekend working expenses. Lot of strict rules and policies you have to follow like wearing shoes, formal dress code etc as it provide more business value and attract customers and to thing in their mind you are more talented peoples, Your exit policy also very strict, If you have bad luck you will get severe headache due to lot of process and torture from HR, All policies are unstable ,what you sign will go to air in 1 to 2 years like notice period etc		Neat environment and everything same as product company ,In addition some companies are providing cars and other facilities to the employees
After 40 years	Several commitments will come in that lifetime , Its little difficult to work hard and do everything correctly in that time period, you may forget something or don't get enough time to do, As all	A policy here is all juniors must follow seniors, What they are saying be the final one and if you have good following skills then you can safely run here, You no need to come on weekends as		Comparatively very less pressure and stress sector ,Normally all the tools you are using its from product companies and they will clarify all your questions burden etc, So in all periods of the lifetime the work effort is constant and no need to

	positions here you need to hard work ,it's impossible to choose a position with less pressure, Better option to choose any other sectors in that time	<p>people who wants to shine will do that one</p> <ol style="list-style-type: none"> 1. chunter 2. discourse on/upon 3. babble 4. blether 5. prohibit others ideas 6. decline others ideas <p>Normally in this period you no need to solve critical problems, sharing ideas to juniors by searching the net would be fine .If you able to switch to some process oriented positions then it's a government job for you</p>		thin about
For lower middle class and poor background students point of view	For these companies highly standard college equal to talented peoples and also English verbal reasoning is important in their interview patterns and they expect good common entrance examination scores which is a big milestone and need more money to spend	Most of the companies doing direct on campus interview in all colleges which is good , Even if the work is not interesting they are the kind hearted people recruiting all talented ,non talented students from all colleges across all areas from city to village		Mostly they prefer experienced employees, So no option
Jump to other sectors	Up to age of 40 ,Nothing will come to your mind to move to other sectors after that it's a good option	From the day 1 life you will thing about to move ,But due to lesser experience and agreement problem strictly you have to continue , After 2 to 3 years you will lose all your confidence and be lack in technological ideas and it will suppress you to move other sectors ,Its more difficult for you to move to product company comparing domain sectors companies		Nothing comes to your mind until you don't want a peaceful life
Job Security	Good Product companies will sustain their product for a lifelong ,so you no need to think about that	Little unsecure ,It's based on the revenue and project count, More revenue will made your job secure and it's your duty to keep the project to run to be safe	-	It's based on the business ,If business down and companies growth was less ,then your job is insecure ,sometimes due to politics you may be throw out if you had bad time, economic crisis and other government rules may insecure your job
